Easily Access More Than 100 Items Check out the last 100 items saved in your system clipboard. Cleverly sort items by a combination of file type, file name, path or date/time. Automatically Duplicate & Save Items to Different Devices Automatic duplicate of recently copied items to different devices. WiseBoard automatically saves your clipboard items, so they are always available. Sort items by file type, file name, path or date/time, check out history, search in the entire history and more. WiseBoard Review WiseBoard is a clipboard extender that offers a few editing and consolidation options as well as the ability to automatically duplicate and save items to different devices. It is available as a portable standalone application and also comes with a portable version that runs from an internal hard

drive. The application was quite simple to work with and offered only a simple interface with only a few editing options. The application does allow you to edit a few preferences, including the maximum clipboard size, how many items are kept track of and whether to automatically save the clipboard items into different devices. The application itself does make heavy use of the keyboard shortcuts and offers some simple editing options. You can use the CTRL+V to quickly paste items, which is much faster than having to select the items from the clipboard. You can easily add new items to your clipboard by pressing the CTRL+N shortcut to create a new item or the CTRL+A shortcut to quickly duplicate the selected item. Having the application run from the system's internal storage means you will have access to any items that you have copied to the clipboard and will automatically be inserted into a new document as you copy them. This means you could easily copy a file to the clipboard, have it automatically inserted into the same document you copied it to, or store several small items to your clipboard such as images or clip art. As is often the case with applications that offer a lot

of customization options, some of the features will be much more of a challenge to configure than others. For example, if you want to automatically duplicate and save items to your devices, it is possible to configure a few things such as which device to use, whether to require a password and how to handle duplicates.
